

A super easy face mask pattern

This is the instruction for sewing the folded face mask with pocket. If you don't want to have pocket, skip the steps 2-3 and start from step 4.

Step 1: Cut 2 main pieces and 1 pocket piece. If you don't want the pocket, omit the pocket piece. Draw the lines as shown in pattern.

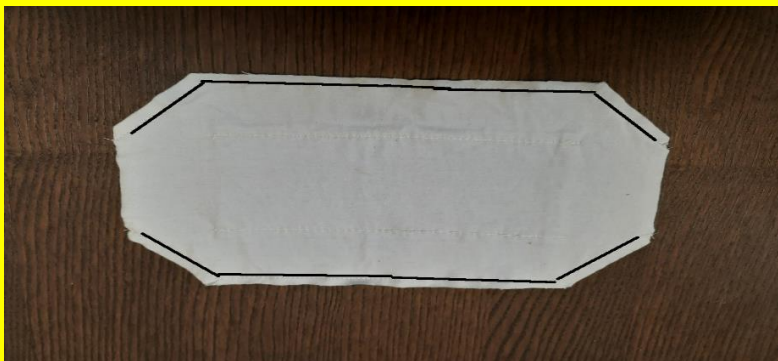

Step 2: Hem the short edges of the pocket piece.

Step 3: Align the pocket piece to the right side of the inner main piece (the layer touching your face). Sew along the long edges of the pocket piece. The stitches lie exactly on the drawn lines.

Step 4: Put the main pieces right sides together, sew along the black lines, leave small openings to turn the fabric inside out.

Step 5: Turn the fabric inside out, press to flatten it (if necessary).

Step 6: Fold the fabric along the markings and sew a line 0.5cm from the folded edge to secure it.

Step 7: Fold one short end twice to hide the raw edge, sew it to make a tube to insert elastic. Repeat with the other side.

Step 8: Thread a 25cm/10in elastic through each tube and tie it. Hide the knot inside the tube. You can adjust the length of the elastic if needed

Tada! You've made it – a really simple and useful mask! You can see the pocket inside.

Hope you guys will love it. Don't forget that masks cannot 100% protect you from the virus. What you need to do is to refrain from going to crowded places, keep a safe distance from others, and most importantly, WASH YOUR HANDS REGULARLY and DON'T TOUCH YOUR MOUTH, EYES OR NOSE!!!
